

ROAD NOISE?

Retrofit Double Glazing with Laminate Glass & Argon Gas is the answer!

NOISE POLLUTION

Living in areas with increased traffic and on-going housing development seems to be the norm these days, but instead of just living with the disturbance and noise intrusion, Get Glazed has the solution for you!

- NOISE REDUCTION
- HEAT RETENTION
- CONDENSATION REDUCTION

We noticed the noise reduction immediately. Along with the house being easier to heat, the difference in the bedrooms is incredible!

A.W - Carlton Ave, SH3, Wanganui

WHAT IS LAMINATE GLASS?

Laminated Safety Glass is made by laminating two sheets of glass with a polyvinyl layer between them. This makes the glass thicker, which shuts out more noise.

WHAT IS ARGON GAS?

Argon Gas is a harmless, naturally occurring gas which is 40% denser than air. This acts as a barrier against heat loss and can further aid noise reduction.
